HALF-NORMAL PATCHBAY HUB

USER GUIDE

basic operation

- Connect instrument source signals to inputs on right side
- Connect destinations to respective outputs on left side
- Insert effects and re-route signals using top jacks

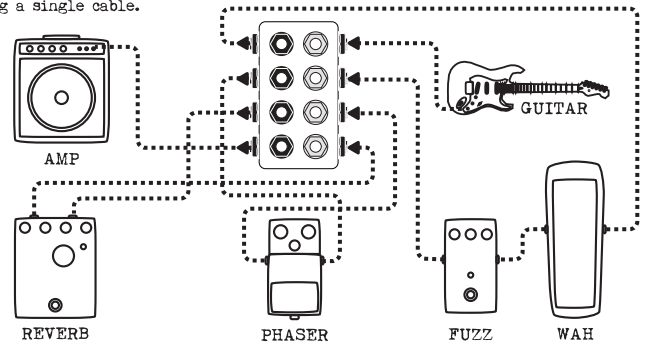

- COPY input signals using the Green SND jacks
- REPLACE signals to destinations using the RTN jacks

*Mute channel amplifiers to avoid pops while patching

pedalboard access points

Each Terminal channel is placed at specific points in the signal chain. New effects can then be inserted at these points, or entire sections can be bypassed using a single cable.

instruments patch hub

Each Terminal channel is a dedicated patch point for an instrument signal on its way to a mixer or DAW. Effects can be inserted into the signal easily, or it can be copied to another channel.
