

# Moschops

## Controls

- Rate: Adjusts the tremolo rate.
- Intensity: Blends the tremolo effect with the dry signal.
- Level: Sets the overall output volume.

## Pulse, Chop, and Flow

Moschops is a dynamic MOSFET tremolo that delivers smooth pulses, sharp chops, and everything in between. Its modulation is warm, clear, and rhythmic, always expressive, never muddy.

## Motion with Character

This isn't just background shimmer. Moschops blends clean and modulated paths to create expressive motion, from bold square-like chops to swirl-like phase shifts. It reacts to how you play, and what you need, rhythm, depth, or a snarl wrapped in lavender.

## Features

- LED color: Pink
- Enclosure: 125B Pastel Violet PANTONE® 7437 C
- Knobs: DAVIES 1900H Cream
- Power Supply: Regular 2.1mm center-negative 9V DC >100mA
- Power Draw: <30mA
- Dimensions: W70mm. L125mm, H60mm
- Weight: 255g
- Switching: True Bypass
- Jacks: Top Mounted

Original Circuits. Unique Tone. Swiss Precision.

## Not Just Depth

Moschops doesn't use a traditional depth control, it blends. At high Intensity, you get classic tremolo: rhythmic, bold, unmistakable. But as you blend the dry signal back in, something else happens, phase cancellation, harmonic shifts, and a movement that starts to feel like vibrato. It's more than tremolo. It's modulation with dimension.

## Motion with Character

At its core, Moschops is about feel. Built with a boosted modulation path and responsive blend stage, it adds motion without sacrificing tone. The modulation has weight, color, and energy

## Chop When You Need It

Crank the Speed and Intensity, and Moschops becomes sharp, percussive, almost gated. It locks to rhythm like a drum machine, but stays musical. Whether you're adding stuttered pulses or building synth-like momentum, the modulation stays expressive, not mechanical.

## Built to Respond

This isn't a fire-and-forget effect. Moschops reacts to your dynamics, pick gently and it breathes, dig in and it hits harder. You're not just setting a rate and walking away. You're shaping something that evolves with your playing.

## Blend Without Disappearing

Tremolos often come with compromises: volume loss, tone thinning, a sense of "stepping on" your sound. Moschops avoids all that. It keeps your core tone clear and present, even at full depth. What you hear is modulation that enhances, not erases.

## A Creature in Motion

With its MOSFET warmth, dual-path design, and sinewave-inspired modulation, Moschops gives tremolo a new voice. It's not just an effect, it's movement with attitude. Pulse, swell, shimmer, chop, whatever you want it to do, it does it with a sense of life.
